

GLOBAL TECHNOLOGIES takes a new step forward ...

On the 15th of July, Global Technologies has moved head office and production plant to his new location in Rousset (FRANCE).

New workshops for the existing services: Cryogenics, Mechanical, Electronic as well as a General Store for spares have been already installed.

A brand new clean room for his Research and Development department will be completed in October of this year.

This acquisition has been completed with a large investment in equipment and facilities in order to cope with the continuous growth of its activities.

With this new asset, Global Technologies is taking another step forward to meet the growing demand and to insure high standard production.

“Over the past few years, our company has become a reference for a large number of services and products within the Semiconductor industry in Europe.

To reinforce this position and to insure that we shall always bring top-class services to our Customers, Global Technologies has moved to his new buildings in July, multiplying extensively his production capacities.

This investment is a new step forward permitted by the confidence of our Customers and Partners as well as the continuous dedication of our team. We shall thank you all of them for their support.”
